Your Personal AI Assistant at your fingertips

SATURDAY

Let Saturday simplify your daily routine allowing you to focus on what matters most. Utilize the power of AI to efficiently organize your responsibilities with prioritized lists extracted from emails and notes, all elegantly packaged into a single user-friendly application.

Say goodbye to overwhelming to-do lists and hectic schedules – let Saturday handle all the details while you stay focused on achieving your goals. Through its custom-trained AI models, Saturday effortlessly organizes your tasks, prioritizes your responsibilities, and optimizes your productivity.

Don't just manage your day – conquer it with Saturday by your side.

SATURDAY TECHNOLOGY STACK

BACK-END

MySQL, M7B, Gemini

PROCESSING

Django, OAuth, REST API

FRONT-END

Node.js, React, Expo

Saturday is a graduation project realized by team Omega which strives to provide an elegant solution that innovates on task efficiency and time management among students and employed young adults.

To achieve its key features, LLM and NLP machine learning models have been contextually trained on the procured dataset of 2.7 million records.

Custom REST APIs have been developed which facilitate the exchange of information between the user-facing mobile application and data processing sites.

Through secure tokenized authorization with the OAuth protocol, mail is iteratively processed by the models, and is automatically summarized and categorized into calendar events and to-do action items. An AI assistant chatbot has been developed, utilizing the implemented NLP backbone to intelligently assist the user in relevant queries about their tasks, and helps them prioritize tasks on the fly.

The final mobile application has been developed in React Native, following modern best UX/UI design practices and utilizing an Expo Go client wrapper to ensure compatibility and stability between all major mobile operating systems.

our FEATURES

Robust AI Models

Leverage the full power of custom-trained Mistral 7B and fine-tuned Gemini LLM and NLP models to enquire about and organize your responsibilities.

Intuitive Chat & To-Dos

Always stay ahead of your goals through processing your emails into actionable to-dos. Expand further with our inbuilt AI-powered chatbot assistant,

Auto Calendar

Derives important evens from your emails and to-dos, and optimizes your time by creating prioritized calendar events to help you stay vigilant.

Cross-Compatibility

Seamlessly use our application on iOS and Android mobile operating systems by registering your account to never lose sight of your goals.
